# Three Maintenance Tips to stay Your AC Running in high Condition

## Clean or replace your filter.

- There's in all probability no additional common reason for AC issues than an unclean or clogged filter. They ought to be cleaned or replaced a minimum of each six months, and doubtless additional usually if there are loads of particles within the air. Otherwise, the AC might not operate at high capability, or might find yourself spreading allergens around your home. Luckily, the air filters are designed to be owner-replaceable, and new filters may be purchased at the most hardware stores.

# **Maintenance Tips to stay Your AC Running in high Condition**

## **Clean the outside of the outside compressor.**

- Another very common reason behind issues is that the mechanical device unit has gotten clogged with junk, which impedes its flow and cut back the power of the AC unit to stay making cool air. It's a decent plan to survey your mechanical device monthly or 2, and certify it hasn't gotten coated in leaves, grass, dirt, and different junk.

## **Check the insulation on the fluid pipes.**

- The pipes running between the outside mechanical device and also the interior of the house are insulated for a reason. Within the event the insulation has come back loose or has vacant patches, it's reaching to considerably cut back the cooling power of your AC system. Replacement insulation is well purchased from hardware stores.
